

**Daily percentiles for S65E 14-day moving average of flow**  
**For September - October based on the period 1965 - 1995**

The graph displays daily S65E flows (cfs) over time, from September 1st to October 27th. The y-axis represents flow in cfs, ranging from 0 to 14,000. The x-axis shows dates from 1-Sep to 27-Oct. The historical flow (orange line) starts at approximately 9,500 cfs, peaks at about 12,000 cfs on September 15th, and then declines to around 1,000 cfs by October 1st. The Max. flow line (purple) peaks at approximately 11,000 cfs on October 13th. The Min. flow line (magenta) drops to 0 cfs by October 13th. The P5, P10, P25, P50, P75, P90, and P95 lines represent different probability levels of flow, generally following a similar trend but with varying magnitudes. Horizontal lines indicate flow categories: Very Dry, Dry, Normal, Wet, Very Wet.

Date	Historical (cfs)	Max. (cfs)	Min. (cfs)	Category
1-Sep	9,500	9,500	9,500	Very Wet
8-Sep	11,500	11,500	11,500	Very Wet
15-Sep	12,000	12,000	12,000	Very Wet
22-Sep	10,000	10,000	10,000	Very Wet
29-Sep	4,000	4,000	4,000	Wet
6-Oct	3,000	8,000	2,000	Wet
13-Oct	2,000	11,000	0	Wet
20-Oct	1,500	7,000	0	Wet
27-Oct	1,000	4,000	0	Dry
